Skills & Tech

Programming Languages

TypeScript/JavaScript, C#, Python, Swift, Dart, Java

Web Technologies

React/Next.js, Angular, Node.js, TailwindCSS

Mobile App Development

React Native/Expo, iOS/SwiftUI, Flutter

AI & Integrations

OpenAI & Anthropic Claude, Ollama/Local LLMs, Plaid, Stripe, Twilio

Cloud & Data

AWS, Docker, Kubernetes, PostgreSQL, Prisma

Frameworks

.NET Core, Node.js, Expo

CI/CD

GitHub Actions, Vitest, XCode Cloud, Jenkins, Azure DevOps

DANNY ECHEVERRI

Software Engineer

Senior Full Stack Engineer with 6+ YOE building products at Microsoft, in health-tech, and at YC-backed startups. Founding mobile engineer on a consumer finance app now managing **millions of dollars in user accounts**, and instrumental in building the **AI assistant** at its center. Dual-background in Computer Science and Neuroscience, at home owning a product end to end, from the first commit to the release process that keeps it shipping.

WORK HISTORY

Senior Software Engineer / Founding Mobile Engineer

2025 - Current *Thread (YC W23 Enterprise SaaS)*

- **Founding mobile engineer.** Built and shipped the company's first mobile app, iOS and Android, from empty repo to a live product now helping users manage **millions of dollars in accounts**, owning the whole experience: sign-in and Face ID, bank-account linking, and every screen users open daily for net worth, spending, and transactions.
- **Instrumental in building the AI assistant**, including the proactive engine that texts and emails users personalized spending summaries, weekly reports, and reminders, turning a dashboard people forget to open into something that reaches out first.
- Shipped the **web features the business runs on**, including subscriptions and billing, budgets, spending summaries, and an onboarding flow that works over both the web and text message.
- **Set the engineering bar as the team scaled**, introducing the company's first automated testing, code-quality checks, and release safeguards so a fast-moving team could ship without shipping bugs.

Software Engineer II

2022 - 2024 *Data Innovations, Charleston, SC*

- Migrated the frontend of **Instrument Manager**, the company's flagship lab-automation platform, from AngularJS to Angular 14, cutting load times **85% (8s to 1.2s)** for **5,000+ daily users**.
- Moved the backend to a **modern cloud architecture (AWS, Docker, Kubernetes)** and built the release pipelines behind it, shortening the path from merge to production.
- Delivered a **new cross-platform mobile app from scratch**, backed by a full automated test suite.

Software Engineer

2020 - 2022 *Microsoft, Seattle, WA*

- Built full-stack features for **Azure DevOps** in React and C#/.NET, used by **2.5M+ people every day**.
- Redesigned core services and caching to make the platform **75% faster to respond** at enterprise scale.
- Wrote shared components **adopted by 15+ Microsoft teams**, held to 95% test coverage and continuously deployed.

EDUCATION

2015 - 2019 Bachelor of Arts: Computer Science

Amherst College - Amherst, MA

2015 - 2019 Bachelor of Arts: Neuroscience

Amherst College - Amherst, MA
